Shuwen Gong

M.Sc. Mobility Engineering @ Chalmers | Systems Engineering |
Autonomous Mobility | Aerospace & Digital Systems Background
Gothenburg, Västra Götaland County, Sweden

Summary

Hybrid Engineering DNA: I enjoy working at the intersection of physical systems and digital technologies. My experience spans aerospace engineering, game systems design, and mobility engineering, giving me a systems-oriented perspective on how complex products are designed, integrated, and improved. My Multi-Stack Focus: ## Complex Systems & Integration: Experienced in coordinating multidisciplinary teams, optimizing industrial processes, and improving system-level integration. From aircraft final assembly to mobility systems, I am interested in how complex technical systems interact, scale, and operate reliably. Digital Logic & Data-Driven Design: My experience in game system design strengthened my ability to work with complex rule-based systems, user behavior analysis, rapid iteration, and quantitative decision-making. It taught me how to transform ambiguous requirements into structured and testable solutions. ## Autonomous & Electric Future: Currently pursuing an M.Sc. in Mobility Engineering at Chalmers University of Technology, with interests in vehicle dynamics, autonomous systems, electrification, and sustainable freight transportation. I am particularly interested in how software, control systems, and vehicle platforms come together to enable next-generation mobility solutions. Cross-Functional Collaboration: Having worked across engineering, quality assurance, production, design, and business environments, I am comfortable communicating across disciplines and aligning stakeholders around technical goals. Always happy to connect with people working in autonomous mobility, vehicle systems, simulation, and sustainable transportation.

Experience

傲世堂

System Designer

June 2023 - February 2025 (1 year 9 months)

Shanghai, China

- **Process Optimization:** Designed complex systems and experiences through creative proposals, adjusting directions based on tests and user feedback. Refined game process by adjusting system unlock progression and gameplay pacing, and improve associated functions.
- **System Optimization & Data-Driven Iteration:** Redesigned the monetization model of a game, maintaining stable revenue and effectively boosting revenue. Adjusted existing gameplay, filling in missing content to enhance the game's framework.
- **Project Management:** Drove program development and artistic execution based on project requirements, emphasizing the "attraction principle" for in-progress projects to stimulate continuous user behavior analysis.

紫龙游戏

System Designer

January 2021 - May 2023 (2 years 5 months)

Beijing, China

- **Challenge Design:** Designed team challenge frameworks and updated solo gameplay to maintain fun across different game stages. Expanded the depth of combat and user behavior analysis, leading to the spontaneous creation of strategy videos and other user-generated content.
- **System Doc:** Designed complex system documentation and iterated based on existing system frameworks and user feedback.
- **Task Design:** Designed game tasks focusing on world exploration with map side quests and features, which successfully brought up game community engagement.
- **Holiday Events:** Designed events and special gameplay for holiday promotion. Responsible for the event's background narrative, specific program complex systems design, and overall artistic presentation.
- **Overseas Operations:** Participated in foreign versions' making, Callis Chronicles, handling localization, dual-version developing, and post-launch updates.

多益网络有限公司

Game Designer

August 2020 - December 2020 (5 months)

Guangzhou, Guangdong, China

- **Optimization:** Optimized various game systems by reducing complexity and redundancy.
- **Writing & Scripting:** Standardized in-game text usage. Designed scripts for new combat challenges.

- Game Testing: Conducted content updates and cross-testing with test cases.
- Research: Assisted with industry research and game investment plan using game knowledge.

AVIC Chengdu Aircraft Industrial (Group) Co., Ltd.

Process Engineer

July 2017 - May 2020 (2 years 11 months)

Chengdu

- Managed and optimized aircraft assembly processes using systematic engineering methodology and data-driven analysis.
- Coordinated multidisciplinary engineering teams to ensure system-level integration, production readiness and quality compliance in aircraft final assembly.
- Led international technical support in Pakistan, bridging engineering cultures for a new aircraft model deployment.
- Authored PFMEA documentation and secured a technical patent (CN210090631U).

Education

Chalmers University of Technology

Master of Engineering - MEng, Mobility Engineering · (September 2025 - June 2027)

南京航空航天大学

Bachelor of Engineering, Aircraft Manufacturing Engineering · (September 2013 - June 2017)
